Monksleigh's website has been improved

Monksleigh's Website has been completely revamped. Thanks to a new layout and added functionality, the services we offer are clearly laid out in their respective sections.

Whether you are looking for complete Business Support and Development or some help with organizing Waste samples collections or analysis, you can find the level of service that suits your needs and your budget in our "Services" drop down menu . The list is not exhaustive as we can adapt to suit your requirements exactly, from a bespoke all inclusive service to a pick and mix approach.

Furthermore, a new "Resources" section has been added, where you can read articles, opinions or comments relating to the waste industry's hot topics; you soon will be able to find reports to help you understand or form an opinion on some of the issues affecting the industry, and, of course, you can keep updated regularly by reading the Monksleigh Newsletter.

Monksleigh is proud to be one of the Wikiwaste sponsor. (see our story below)

A direct link to Wikiwaste, the free online encyclopedia about the UK waste and associated resources market, has also been added so you can find all the information you need on the Waste and Resources market, quickly and easily.

Dashboard

Monksleigh's Dashboard for Waste analysis and data interpretation services has just been improved.

The system has been further automated to speed up the data entry process and to facilitate the archiving and processing of sample results data.

As before, Monksleigh can assist you with anything from organizing collection

samples to a complete analysis and interpretation of your data.

Thanks to the improved entry process, you can now archive your past sample results, quickly and effectively, as well as organize and simplify the data processing for your future results. No more spreadsheets. The dashboard allows you to check your results at a glance by flagging up discrepancies or issues clearly and efficiently. You may want to contact us to discuss the services we can offer and see if the dashboard can be a practical and economical solution for your sample results storage and data analysis.

Future of RDF and SRF exports

The world of RDF and SRF is evolving due to new regulations and policies.

The share of SRF exported is becoming more important. New regulations concerning packaging and EPR will have a profound effect on the production of RDF and SRF but will also affect the pattern of exports. This has the potential to radically transform the whole industry.

We have plotted the trend of exports of SRF and RDF from England since 2015. Read our thoughts on the [future of SRF and RDF exports](#) in the Resources section on the [Monksleigh](#) website.

Monksleigh is proud to support Wikiwaste

Over the last few years, Monksleigh's team has worked hard and given a lot of its time to the creation and improvement of Wikiwaste, a free encyclopedia about the UK Waste and associated Resources Market.

During the various lockdowns, they put their time to best use by populating hundreds of pages with essential information, data and statistics regarding the Waste, Recycling and Resources Market and it is now available for all to view, free of charge on the Wikiwaste website.

To find all the information you need about the Waste and Recycling industry, in a clear and practical format, visit [Wikiwaste](#).
